IQ-501 INTELLIGENT QUALITY OPTIMIZER REDEFINES ACCURACY.

You've come to expect quality and precision from Konica Minolta and the new IQ-501 Intelligent Quality Optimizer lives up to our reputation. Picture constant, closed-loop paper registration — image-on-image, image-on-paper and side one/ side two registration — on every page, measured and managed automatically, in real time, by your digital press. What if you could skip the use of an external spectrophotometer, manual measurements or complex color formulas, yet achieve the highest industry standards for color and registration with the simple touch of a button?

You can, today, with the IQ-501 Intelligent Quality Optimizer on the AccurioPress C3080 series. How IQ-501 will drive results for your business:

- Minimizing variability in color and registration
- Reducing waste through real-time defect detection
- Minimizing manual intervention
- Increasing uptime by decreasing the need for service with automated, autonomous self-correction
- Executing the highest standards of accurate color that meet G7, Gracol and other print industry calibration requirements

The IQ-501 Intelligent Quality Optimizer is compatible with all controller offerings and allows you to achieve industry standards for color, such as G7 and Gracol, all at the touch of a button. The C3080 series also supports Cloud-based color management software for further color control.

HOW THE IQ-501 WORKS

IQ-501 Intelligent Quality Optimizer uses a spectrophotometer/scanner combination to examine each sheet in real time, and using a closed-loop feedback system, continually measures and transmits color density, color fidelity and registration information to the controller. Corrections are then made on the fly, ensuring that every print is of the highest quality, with the least amount of labor intervention.
